Pramāṇa

journal of physics

Volume 27, July–December 1986

CONTENTS

Classical Mechanics

Hamiltonian systems with indefinite kinetic energy
N N Rao, B Buti and S B Khadkikar 497–506

Mathematical Physics

Quasi-invariants and generalized Killing vectors-II
B R Sitaram and Ram K Varma 363–370

The complex sine-Gordon theory: soliton solutions through the virial approach *G P Malik and K Sengupta* 615–622

On some operators in multichannel scattering *S Mukherjee* 623–628

Statistical Mechanics and General Relativity

The three faces of Maxwell's equations
N Mukunda and E C G Sudarshan 1–18

An age-dependent model of cavity radiation and its detection
S K Srinivasan 19–32

Quantum-ohmic resistance fluctuation in disordered conductors—An invariant imbedding approach *N Kumar* 33–42

Effect of polymerization and depolymerization reactions on molecular size distribution in living polymers *F C Auluck, G C Gupta and V S Nanda* 43–46

Electron transport in rectangular quantum wells *B R Nag* 47–63

Gravitational fields with space-times of Bianchi type IX
P C Vaidya and L K Patel 63–72

Charged particle orbit in the field of two charges placed symmetrically near a Schwarzchild black hole
V Chellathurai, S V Dhurandhar and N Dadhich 485–496

Spherically symmetric free fall collapse
J Krishna Rao and M Annapurna 637–646

Effective suppression of period-doubling in two diffusively coupled logistic maps *S Puri and E Atlee Jackson* 717–724

Velocity dependent inertial induction—possible explanation for super-gravity shift at solar limb *Amitabha Ghosh* 725–730

Quantum Mechanics

Analogue of Aharonov-Bohm effect in spin gauge theory *P C Naik* 629–635

Relativistic dynamics for spin zero and spin half particles *J Thakur* 731–745

Particle Physics

Duality in physical sciences and beyond *A N Mitra* 73–88

Ionization states of cosmic rays: Anuradha (IONS) experiment in Spacelab-3 *S Biswas, R Chakraborti, R Cowsik, N Durgaprasad, P J Kajarekar, R K Singh, M N Vahia, J S Yadav, N Dutt, J N Goswami, D Lal, H S Mazumdar, D V Subhedar and M K Padmanabhan* 89–105

Boson-fermion relations in several dimensions *K R Parthasarathy and K B Sinha* 105–116

Supersymmetric classical mechanics *S N Biswas and S K Soni* 117–128

Higgs couplings in the integer-charge quark model *S Lakshmibala and G Rajasekaran* 371–382

A study of the Higgs effect in the five-dimensional Kaluza-Klein theory *Amar Maheshwari* 383–392

Exact potential minimization for a supergravity model *A S Joshipura, A Mukherjee and S K Soni* 507–512

Supersymmetric preon models with gauged colour-flavour symmetry *G M Staebler and R E Marshak* 513–522

Field theoretic model of composite particles: a variational approach *S P Misra and S Panda* 523–536

Elastic and inelastic scattering of 270 MeV ^{3}He particles from ^{58}Ni, ^{90}Zr, ^{116}Sn and ^{208}Pb *P P Singh, Q Li, P Schwandt, W W Jacobs, M Saber, E J Stephenson, A Saxena and S Kailas* 747–760

Quarkonium spectroscopy with vacuum polarization connection *A K Roy and S Mukherjee* 761–771

Nucleon octet in a relativistic logarithmic potential *S N Jena and D P Rath* 773–782

Magnetic moments of octet baryons in a chiral potential model *N Barik and M Das* 783–793

Nuclear Physics

The thorium cycle for fast breeder reactors *R Ramanna and S M Lee* 129–138

Proton-nucleus optical model potential at low energies—a review *M K Mehta and S Kailas* 139–160

Phase shift analysis of hyperon-nucleon elastic scattering using optimized polynomial expansion techniques *S Mohanty, J K Mohapatra and B B Deo* 393–400

The odd-even shifts in odd-odd deformed nuclei based on residual interaction studies *P C Sood and R S Ray* 537–548

Surface diffuseness of deformed and rotating nuclei *Alok Saxena and V S Ramamurthy* 679–684

Alpha particle and deuteron impact *L*-shell ionization of Ar, Cu, Ge, Br, Zr and Ag *S N Chatterjee and B N Roy* 794–802

Instrumentation and Experimental Techniques

An acoustic chamber for sound intensity measurements *N Tandon and U Kristiansen* 413–416

Accurate measurement of pressure *J K N Sharma and K K Jain* 417–434

Accurate measurement of thermal expansion of solids between 77 K and 350 K by 3-terminal capacitance method *H N Subrahmanyam and S V Subramanyam* 647–660

An x-band time domain electron paramagnetic resonance spectrometer *Ranjan Das, Balu Venkataraman, Vinod R Bhagat, Ajit S Ghangrekar, Thomas Kuruvilla, B K Chaturvedi, G S Isola, B M Marwaha, P G Nair, R S Parolia and B K Sarkar* 661–677

Atomic and Molecular Physics

Photophysics of 9-aminoacridinium hydrochloride *D D Pant, G C Joshi and H B Tripathi* 161–170

Simulation of high frequency positron behaviour in argon gas *Vikram Singh and P S Grover* 401–408

Higher order effects in large-angle coplanar symmetric (e, $2e$) processes at high energies *K S Baliyan and M K Srivastava* 409–412

Theoretical study of the satellites and hypersatellites in the K-LL Auger spectrum of magnesium *Lakshmi Natarajan, A V Tankhiwale and C Mande* 689–693

Relative photodissociation cross-section of NaCs molecule, using argon ion laser lines *A Sharma, M N Dixit and G L Bhale* 695–700

Optics and Instrumentation

Flat field spectrograph using convex holographic diffraction grating and concave mirror — *N C Das and M V R K Murty* 171–192

Optically selective coatings — *K L Chopra and G B Reddy* 193–218

Plasma Physics

Effect of random density irregularities on nonlinear evolution of Langmuir waves in interplanetary medium — *B Buti, M Mohan and S K Alurkar* 219–232

Double-diffusive magnetoconvection — *N Rudraiah* 233–266

Enhancement of ablation smoothing in laser-irradiated, high Z coated, thin foil targets — *L J Dhareshwar, P A Naik and H C Pant* 435–442

Feedback control of flute instability in mirrors by neutral beams — *Avinash* 443–448

Effect of radio frequency field on toroidal plasma parameters — *D Bora, K Satyanarayana and V N Rai* 549–561

Calorimetric study of laser-irradiated thin foil targets — *T S Shirsat, S Sharma and H C Pant* 701–706

Design of diamagnetic coil with non-encircling compensation coil system for measuring the plasma diamagnetism in toroidal devices — *S K Mattoo* 803–811

Solid State Physics

Electron and x-ray diffraction studies on $Al_{86}Fe_{14}$, $Al_{82}Fe_{18}$ and $Al_{75}Fe_{25}$ quasicrystals — *J A Sekhar, T Rajasekharan, P Rama Rao, G Parthasarathy, S Ramkumar, E S R Gopal, C S Lakshmi and R M Mallya* 267–274

Study of the K_α satellites and hypersatellites in the x-ray and Auger spectra of neon — *Lakshmi Natarajan, A V Tankhiwale and C Mande* 275–290

Effect of high pressure on the vibrational modes and the energy gap of ZnP_2 — *A Jayaraman, R G Maines Sr and T Chattopadhyay* 291–298

Defects in smectic C* liquid crystals — *G S Ranganath* 299–306

Interaction of second sound with acoustic waves in solids — *K S Viswanathan* 307–321

Spin fluctuation effects in substituted $CeRu_2Si_2$ and $YbPd_2Si_2$ alloys — *A M Umarji, C Godart, L C Gupta and R Vijayaraghavan* 321–330

Mössbauer spectroscopy of green shale from banded iron formation — *D Das, M B Chakrabarti, C K Majumdar and M K Bose* 331–336

Current trends in the theories of gas-surface interaction — *Harjinder Singh and B M Deb* 337–361

Pressure induced structural transitions in PbI_2: A high-pressure Raman and optical absorption study
A Jayaraman, R G Maines Sr and T Chattopadhyay 449–458

Switching behaviour of unijunction transistor in the presence of magnetic field *S L Agrawal and R Swami* 459–468

Lattice parameter and thermal expansion of CsCl and CsBr by x-ray powder diffraction. I. Thermal expansion of CsCl from room temperature to 90° K *V Ganesan and K S Girirajan* 469–474

Lattice parameter and thermal expansion of CsCl and CsBr by x-ray powder diffraction. II. Thermal expansion of CsBr from room temperature to 78·2° K *V Ganesan and K S Girirajan* 475–478

Response function approach to van der Waals' interaction between atom and metal surface *P R Rao and G Mukhopadhyay* 563–574

Ionic conductivity study of CaF_2:Nd single crystals
Uma Subramanian and M L Mukherjee 575–584

On the use of Fourier-transformed Compton profile for the determination of band occupancies in certain solids *G P Das and V C Sahni* 585–594

Propagation of electrons in linear atomic arrays *Philip D'Souza* 595–612

High pressure Raman scattering in $Pb_5Ge_3O_{11}$ *R K Soni and K P Jain* 707–712

Temperature dependence of luminescence emission from cerium and europium doped MgO under x-ray excitation
M N Bapat and S Sivaraman 813–820

XANES and EXAFS study of some metal-metalloid glasses
K B Garg, Kavita S Jerath, H S Chauhan and Usha Chandra 821–833

High pressure phase transitions in organic solids II: X-ray diffractions study of *p*-dichlorobenzene at high pressures
Hema Sankaran, Surinder M Sharma, S K Sikka and R Chidambaram 835–839

Letter

Baryon asymmetry generation through preonic monopoles
K Maharana and L P Singh L479–L482

Paramagnetic nematic liquid crystals
S Chandrasekhar, B K Sadashiva, S Ramesha and B S Srikanta L713–L715

Errata 483,613
